Ron Goldstein Looking good Garrett, although I think you should move those 2 SP-990's outward a bit. The TS-990 exhausts hot air out the side vents of the case. You might not have enough air flow with the speakers that close. I keep my 2 speakers about an inch away from the radio. I might join you in the contest over the weekend. GOOD LUCK !!! **** RON....ka2iia ****

Ralph Yang Suggest put 1/2" thick rubber spacer in between TS-990 and speaker to allow ample of intake air flow for cooling. Or not you will experience sudden shut down.
